EDITORIAL NOTE

THE INDEX includes original publications in all languages, together with translations and new editions in English, French, German, and Italian. Offprints of magazine articles are not noted where the original sources are accessible to the compilers. Last year's titles received too late for insertion are included in this issue, but earlier titles are inserted only in exceptional cases.

The coöperation of authors and publishers is requested in sending us particulars of books and articles for future issues. Notices of omission or error in the present list will be gladly received. Accuracy is especially desired in *wording of title, journal or publisher, volume or place of publication, and pagination.* Authors will confer a favor by indicating the suitable *classification* of such works as they bring to our attention.

The circumstances under which the last number of the INDEX was compiled were more favorable than those attending this year's edition. The list of temporarily suspended European and American periodicals lengthened, more journals became inaccessible, and many of our collaborators found the pressure of military service so great that the work of collecting titles grew difficult or impossible. The editor is grateful, however, for assistance received from the British, Italian, Scandinavian, and American collectors who were in a position to do the work.

The INDEX again prints a selected list of bibliographies in allied subjects. Toward its extension or revision the editor will be glad to receive suggestions.

We venture once more to call the attention of authors and editors to certain embarrassments (noted more fully in our 1910 issue) which hamper the compilation and use of any bibliography:

1. The same material is sometimes published in two forms—either in two distinct periodicals, or in a periodical bearing two different titles. Apart from the ethical question involved, this duplication causes much confusion in citation.

2. The omission of authors' initials is a frequent source of perplexity in compiling and using references. To avoid confusion of identity, every contributor to science, however great his con-

temporary fame, should feel bound to give at least his initials and full last name.

3. Accuracy of citation is greatly assisted if offprints are allowed to retain their original page numbers.

4. From the bibliographer's standpoint it is extremely desirable that every magazine should number its volumes consecutively, not merely with the year-number, and should avoid inserting "supplementary volumes." It is also desirable to avoid "new series" of old magazines under the same title. These peculiarities unnecessarily complicate citations and cause loss of time in consulting the files of a journal.

5. It is desirable that Russian writers and others should uniformly transliterate their names into the Roman alphabet, in order to avoid citing the same individual in two alphabetic places.
